ABOUT

Organic growth, treated as an engineering problem.

I'm Darrell Locke — an SEO and content strategist with fifteen years in organic search.

I've spent my career helping U.S. & International businesses — from small local operators to mid-market and large brands — win rankings, traffic, and revenue from search. Client names and results from that work are protected under NDA; I'm glad to walk through scope and approach on a call.

Most recently, I've worked as SEO & content strategist inside a cross-market growth team, delivering the international engagements featured in this deck — multilingual, multi-market programs measured entirely in Google Search Console.

My focus today: the next generation of search — AI Overviews, ChatGPT, Perplexity, and the citation economy replacing the classic SERP.

AT A GLANCE

ROLE

SEO & Content Strategist

EXPERIENCE

15 years in organic growth

BASE

FOCUS

Content that ranks · Technical SEO · AI Search (GEO/AEO)

End-to-end organic growth.

Content Strategy & Writing

Topic selection engineered to reach page one — entity-based briefs, conversion-focused copy, and editorial that answer engines quote.

Technical & On-Page SEO

Site architecture, indexation control, Core Web Vitals, structured data, and on-page fixes that unlock crawl and rankings.

Competitive & Market Analysis

Competitor gap analysis, feasibility studies, and opportunity sizing before a dollar is spent on content.

Keyword Architecture

One primary keyword per page, zero cannibalization — a disciplined map connecting every URL to demand.

AI Search Optimization

GEO & AEO for AI Overviews, ChatGPT, Perplexity, Gemini, and Copilot — engineering citations, not just rankings.

Growth & Revenue Analytics

GSC and GA4 pipelines, traffic-to-sales tracking, credibility fixes, and executive reporting that ties SEO to revenue.

A five-phase framework that repeats — and compounds.

01

Discover

Forensic audit: crawl data, competitor gaps, intent mapping, AI-citation footprint.

02

Strategize

Topical blueprint and opportunity sizing — prioritized by traffic, difficulty, and business value.

03

Engineer

Technical hygiene: indexation, schema, internal links, page speed and CWV remediation.

04

Produce

Entity-rich briefs and expert-led editorial — every page mapped to one primary keyword.

05

Amplify

Authority signals, digital PR, and AI-engine citations across the answer economy.

Fifteen years with American & International businesses.

Across a decade and a half I've planned and executed SEO and content programs for companies of every size — local operators, mid-market firms, and large brands — spanning multiple verticals.

Small & Local

Local visibility, Google Business Profile, review strategy, and service-page architecture for lead-driven businesses.

Mid-Market

Full-funnel content programs, technical rebuilds, and keyword architecture built for scale and sales.

Large Brands

Enterprise content operations, migration support, and authority strategy across competitive verticals.

A note on confidentiality — client names and performance data from these engagements are protected under NDA. I'm happy to discuss scope, approach, and references on a call.

Documented results — delivered as part of a growth team.

The case studies that follow are international programs I delivered as SEO & content strategist within a cross-market growth team. Every metric comes from Google Search Console and third-party tools. Three featured studies follow.

A 50-million-impression organic engine.

MY ROLE ON THE TEAM

- Topical architecture — cluster-based site structure mapped to buyer intent.
- Content strategy — entity-first briefs and programmatic pages at scale.
- Keyword discipline — one primary keyword per page, zero cannibalization.
- AI-search positioning — citations engineered across AI Overviews, ChatGPT, Perplexity, and Grok.

TOP MARKETS BY ORGANIC TRAFFIC (MONTHLY)

One brand · organic visits from 34 countries · Semrush / GSC

Every metric — moved, in six months.

Six-month period vs. the preceding six months. Source: Google Search Console.

HOW THE TEAM DID IT — AND MY PART

- 

Sub-niche domination

Dedicated service pages for under-served verticals: clinics, restaurants, cafes, pharmacies.
- 

Local intent coverage

City-by-city pages with local proof, transparent pricing, and dispatch-radius schema.
- 

Answer-first content

Briefs I structured around real user questions — written to be quoted, not just ranked.
- 

AI Overview engineering

Schema and Q&A blocks that placed the brand inside Google AI Overviews on 3 commercial queries.

Seven commercial verticals. One entity engine.

COMMERCIAL CLICKS

#1–#2

ORGANIC POSITIONS ACROSS KSA

7

VERTICALS WON, ONE DOMAIN

THE CHALLENGE

A fragmented B2B furniture market where buyers research across seven distinct verticals — restaurants, cafes, universities, schools, institutes, offices, and storage. Each has its own intent signature, SERP layout, and decision committee. Most competitors win one vertical; the brand needed all seven without diluting topical authority.

MY CONTRIBUTION

- Seven dedicated content silos — each built as a complete entity graph for its niche.
- Image-search optimization — alt text, schema, and product data engineered for image packs.
- Answer-first blocks that earned citations inside Google's AI Overview for institutional queries.
- Wholesale + local layering — B2B intent combined with city-level signals at every funnel stage.

Built for where search is going — not where it was.

search behavior is shifting to AI answers faster than any market on earth. I optimize for the whole citation economy.

GEO

Generative Engine Optimization

Engineering brand presence inside ChatGPT, Perplexity, Gemini, Copilot, and Grok — citation-friendly structures, entity reinforcement, source-authority signals.

AEO

Answer Engine Optimization

Content blocks designed for extraction into AI Overviews and zero-click features — answer-first headings, semantic Q&A schema, quotable atomic units.

ENTITY SEO

Entity-First Topical Authority

Every page mapped to its entity graph in advance — related entities, semantic neighbors, and the ontology gaps Google's knowledge model expects.

LET'S BUILD SOMETHING

Ready when *you are.*

Open to senior remote roles, consulting engagements, and agency partnerships across the U.S. and Canada. If you're investing in organic as a long-term moat — let's talk.
